Research Cluster Workshop
October 14, 2026

For the October 28 Progress Review, you are required to demonstrate significant progress in working through your research methods and tactics.

This includes incorporating **visual representation and making as an integral component of your research**.

This workshop is devoted to actively developing visual material as part of your research process. You should spend the **first 60 minutes working intensively on producing new visual material** (drawing, diagramming, modelling, mapping, organizing, visualizing, etc.)

For the remainder of the session, each student will give a brief **show-and-tell (~5 minutes/student)** presenting what they produced during the workshop and explaining how it contributes to their research.

Possible activities include:

- Standard architectural drawing (plans, sections, isometrics, etc.)
- Experimental architectural drawing (hybrid, exploded, layered drawings, etc.)
- Analytical architectural drawing (figure-ground studies, comparative drawings, analytical sections, etc.)
- Collaging
- Digital modelling
- Diagramming
- Critically curating and organizing photographs
- Experimental and analytical data organization/representation
- Purposeful sketching
- Mapping

The objective is to **make and test something**, not simply to discuss or plan what you might make. Treat the session as an opportunity to advance your research through visual experimentation.
